📚 Event Management System - Dokumentasi Lengkap

🌐 Informasi Server

Base URL: `http://104.248.153.158/event-api/`

API Endpoint: `http://104.248.153.158/event-api/api.php`

Web Tester: `http://104.248.153.158/event-api/tester.html`

🚀 Quick Start

1. Testing dengan Web Interface

Buka browser dan akses:

```
http://104.248.153.158/event-api/tester.html
```

Fitur yang tersedia:

- ✅ Create Event (Buat event baru)
- ✅ Get All Events (Lihat semua event)
- ✅ Get by Date (Filter berdasarkan tanggal)
- ✅ Get by Date Range (Filter range tanggal)
- ✅ Get by ID (Cari event spesifik)
- ✅ Update Event (Edit event)

- ✅ Delete Event (Hapus event)
- ✅ Statistics (Lihat statistik)

2. Testing dengan API Langsung

```bash
# Get all events
curl http://104.248.153.158/event-api/api.php

# Get events by date
curl "http://104.248.153.158/event-api/api.php?date=2025-11-15"
```

📡 API Documentation

Base URL

```
http://104.248.153.158/event-api/api.php
```

🔵 1. GET All Events

Endpoint

```
GET http://104.248.153.158/event-api/api.php
```

Request

```bash
```

```
curl -X GET http://104.248.153.158/event-api/api.php
```

Response (200 OK)

json

```
{
  "status": 200,
  "message": "Events retrieved successfully",
  "data": [
    {
      "id": "1",
      "title": "Workshop Laravel",
      "date": "2025-11-15",
      "time": "09:00:00",
      "location": "Jakarta Convention Center",
      "description": "Belajar Laravel dari dasar hingga mahir",
      "capacity": "100",
      "status": "upcoming",
      "created_at": "2025-10-29 10:00:00",
      "updated_at": "2025-10-29 10:00:00"
    }
  ],
  "timestamp": "2025-10-29 15:30:00"
}
```

🔵 2. GET Event by ID

Endpoint

```
GET http://104.248.153.158/event-api/api.php?id={event_id}
```

Request

```bash
curl -X GET "http://104.248.153.158/event-api/api.php?id=1"
```

Response (200 OK)

```json
```

```
{
  "status": 200,
  "message": "Event retrieved successfully",
  "data": {
    "id": "1",
    "title": "Workshop Laravel",
    "date": "2025-11-15",
    "time": "09:00:00",
    "location": "Jakarta Convention Center",
    "description": "Belajar Laravel dari dasar hingga mahir",
    "capacity": "100",
    "status": "upcoming",
    "created_at": "2025-10-29 10:00:00",
    "updated_at": "2025-10-29 10:00:00"
  },
  "timestamp": "2025-10-29 15:30:00"
}
```

Response (404 Not Found)

json

```
{
  "status": 404,
  "message": "Event not found",
  "data": null,
  "timestamp": "2025-10-29 15:30:00"
}
```

🔵 3. GET Events by Date

Endpoint

```
GET http://104.248.153.158/event-api/api.php?date={YYYY-MM-DD}
```

Request

```bash
curl -X GET "http://104.248.153.158/event-api/api.php?date=2025-11-15"
```

Response (200 OK)

```json
```

```
{
 "status": 200,
 "message": "Events retrieved successfully for date: 2025-11-15",
 "data": [
  {
   "id": "1",
   "title": "Workshop Laravel",
   "date": "2025-11-15",
   "time": "09:00:00",
   "location": "Jakarta Convention Center",
   "description": "Belajar Laravel dari dasar hingga mahir",
   "capacity": "100",
   "status": "upcoming",
   "created_at": "2025-10-29 10:00:00",
   "updated_at": "2025-10-29 10:00:00"
  }
 ],
 "timestamp": "2025-10-29 15:30:00"
}
```

🔵 4. GET Events by Date Range

Endpoint

```
GET http://104.248.153.158/event-api/api.php?date_from={YYYY-MM-DD}&date_to={YYYY-MM-DD}
```

Request

```
bash
```

```
curl -X GET "http://104.248.153.158/event-api/api.php?date_from=2025-11-01&date_to=2025-11-30"
```

Response (200 OK)

json

```
{
  "status": 200,
  "message": "Events retrieved successfully",
  "data": [
    {
      "id": "1",
      "title": "Workshop Laravel",
      "date": "2025-11-15",
      ...
    },
    {
      "id": "2",
      "title": "Tech Conference 2025",
      "date": "2025-11-20",
      ...
    }
  ],
  "timestamp": "2025-10-29 15:30:00"
}
```

🔵 5. GET Events by Status

Endpoint

```
GET http://104.248.153.158/event-api/api.php?status={status}
```

Valid Status Values

- `upcoming` - Event yang akan datang
- `ongoing` - Event sedang berlangsung
- `completed` - Event sudah selesai
- `cancelled` - Event dibatalkan

Request

```bash
curl -X GET "http://104.248.153.158/event-api/api.php?status=upcoming"
```

🔵 6. GET Statistics

Endpoint

```
GET http://104.248.153.158/event-api/api.php?stats=1
```

Request

```bash
```

```
curl -X GET "http://104.248.153.158/event-api/api.php?stats=1"
```

Response (200 OK)

```
json

{
  "status": 200,
  "message": "Statistics retrieved successfully",
  "data": {
    "total": "15",
    "upcoming": "8",
    "ongoing": "2",
    "completed": "4",
    "cancelled": "1"
  },
  "timestamp": "2025-10-29 15:30:00"
}
```

🟢 7. POST Create Event

Endpoint

```
POST http://104.248.153.158/event-api/api.php
```

Request Headers

```
Content-Type: application/json
```

Request Body

json

```
{
  "title": "Workshop React",
  "date": "2025-12-01",
  "time": "14:00:00",
  "location": "Tech Hub Jakarta",
  "description": "Belajar React untuk pemula",
  "capacity": 50,
  "status": "upcoming"
}
```

cURL Example

bash

```
curl -X POST http://104.248.153.158/event-api/api.php \
-H "Content-Type: application/json" \
-d '{
  "title": "Workshop React",
  "date": "2025-12-01",
  "time": "14:00:00",
  "location": "Tech Hub Jakarta",
  "description": "Belajar React untuk pemula",
  "capacity": 50,
  "status": "upcoming"
}'
```

Response (201 Created)

json

```
{
  "status": 201,
  "message": "Event created successfully",
  "data": {
    "id": "6",
    "title": "Workshop React",
    "date": "2025-12-01",
    "time": "14:00:00",
    "location": "Tech Hub Jakarta",
    "description": "Belajar React untuk pemula",
    "capacity": "50",
    "status": "upcoming",
    "created_at": "2025-10-29 15:30:00",
    "updated_at": "2025-10-29 15:30:00"
  },
  "timestamp": "2025-10-29 15:30:00"
}
```

Response (400 Bad Request)

json

```
{
  "status": 400,
  "message": "Field 'title' is required",
  "data": null,
  "timestamp": "2025-10-29 15:30:00"
}
```

🟡 8. PUT Update Event

Endpoint

PUT http://104.248.153.158/event-api/api.php?id={event_id}

Request Headers

Content-Type: application/json

Request Body

json

```
{
  "title": "Workshop Laravel Advanced",
  "date": "2025-11-16",
  "time": "10:00:00",
  "location": "Jakarta Convention Center",
  "description": "Laravel level advanced",
  "capacity": 80,
  "status": "upcoming"
}
```

cURL Example

bash

```
curl -X PUT "http://104.248.153.158/event-api/api.php?id=1" \
-H "Content-Type: application/json" \
-d '{
  "title": "Workshop Laravel Advanced",
  "date": "2025-11-16",
  "time": "10:00:00",
  "location": "Jakarta Convention Center",
  "description": "Laravel level advanced",
  "capacity": 80,
  "status": "upcoming"
}'
```

Response (200 OK)

```
json
```

```
{
  "status": 200,
  "message": "Event updated successfully",
  "data": {
    "id": "1",
    "title": "Workshop Laravel Advanced",
    "date": "2025-11-16",
    "time": "10:00:00",
    "location": "Jakarta Convention Center",
    "description": "Laravel level advanced",
    "capacity": "80",
    "status": "upcoming",
    "created_at": "2025-10-29 10:00:00",
    "updated_at": "2025-10-29 15:45:00"
  },
  "timestamp": "2025-10-29 15:45:00"
}
```

🔴 9. DELETE Event

Endpoint

```
DELETE http://104.248.153.158/event-api/api.php?id={event_id}
```

Request

bash

```
curl -X DELETE "http://104.248.153.158/event-api/api.php?id=1"
```

Response (200 OK)

```json
{
  "status": 200,
  "message": "Event deleted successfully",
  "data": null,
  "timestamp": "2025-10-29 15:30:00"
}
```

Response (404 Not Found)

```json
{
  "status": 404,
  "message": "Event not found",
  "data": null,
  "timestamp": "2025-10-29 15:30:00"
}
```

📋 Field Validation

Required Fields

Field	Type	Format	Description
title	string	max 255 chars	Nama event
date	date	YYYY-MM-DD	Tanggal event
time	time	HH:MM:SS	Waktu mulai

Field	Type	Format	Description
location	string	max 255 chars	Lokasi event
status	enum	upcoming/ongoing/completed/cancelled	Status event

Optional Fields

Field	Type	Format	Description
description	text	-	Deskripsi event
capacity	integer	>= 0	Kapasitas peserta

💻 Contoh Integrasi

JavaScript/Fetch API

```javascript
```

```javascript
const API_URL = 'http://104.248.153.158/event-api/api.php';

// Get all events
async function getAllEvents() {
  const response = await fetch(API_URL);
  const data = await response.json();
  console.log(data.data);
}

// Create event
async function createEvent(eventData) {
  const response = await fetch(API_URL, {
    method: 'POST',
    headers: {
      'Content-Type': 'application/json'
    },
    body: JSON.stringify(eventData)
  });
  return await response.json();
}

// Get events by date
async function getEventsByDate(date) {
  const response = await fetch(`${API_URL}?date=${date}`);
  const data = await response.json();
  return data.data;
}

// Update event
async function updateEvent(id, eventData) {
  const response = await fetch(`${API_URL}?id=${id}`, {
    method: 'PUT',
```

```
    headers: {
      'Content-Type': 'application/json'
    },
    body: JSON.stringify(eventData)
  });
  return await response.json();
}

// Delete event
async function deleteEvent(id) {
  const response = await fetch(`${API_URL}?id=${id}`, {
    method: 'DELETE'
  });
  return await response.json();
}
```

PHP

```
php
```

```php
<?php
$apiUrl = 'http://104.248.153.158/event-api/api.php';

// Get all events
$response = file_get_contents($apiUrl);
$events = json_decode($response, true);

foreach ($events['data'] as $event) {
    echo $event['title'] . "\n";
}

// Create event
$data = [
    'title' => 'Workshop React',
    'date' => '2025-12-01',
    'time' => '14:00:00',
    'location' => 'Tech Hub Jakarta',
    'status' => 'upcoming'
];

$options = [
    'http' => [
        'method' => 'POST',
        'header' => 'Content-Type: application/json',
        'content' => json_encode($data)
    ]
];

$context = stream_context_create($options);
$result = file_get_contents($apiUrl, false, $context);
$response = json_decode($result, true);
```

```
echo $response['message'];
?>
```

Python

```
python
```

```python
import requests
import json

API_URL = 'http://104.248.153.158/event-api/api.php'

# Get all events
response = requests.get(API_URL)
events = response.json()
print(events['data'])

# Create event
event_data = {
    'title': 'Workshop React',
    'date': '2025-12-01',
    'time': '14:00:00',
    'location': 'Tech Hub Jakarta',
    'status': 'upcoming'
}

response = requests.post(
    API_URL,
    headers={'Content-Type': 'application/json'},
    data=json.dumps(event_data)
)

print(response.json())

# Get events by date
response = requests.get(f'{API_URL}?date=2025-11-15')
events = response.json()
print(events['data'])
```

Android (Kotlin)

```kotlin
// Update API_URL di MainActivity.kt
private val API_URL = "http://104.248.153.158/event-api/api.php"
```

Kemudian gunakan aplikasi Android yang sudah dibuat sebelumnya!

🔒 HTTP Status Codes

Code	Meaning	Description
200	OK	Request berhasil
201	Created	Resource berhasil dibuat
400	Bad Request	Data tidak valid atau field required kosong
404	Not Found	Resource tidak ditemukan
405	Method Not Allowed	HTTP method tidak didukung
500	Internal Server Error	Error di server

🎯 Use Cases

1. Membuat Aplikasi Mobile Event

- Gunakan API untuk GET events by date
- Tampilkan dalam list view

- Implementasi search dan filter

2. Website Event Management

- Admin bisa CRUD events
- User bisa browse dan search events
- Tampilkan calendar view

3. Integration dengan Google Calendar

- Sync events dari API
- Create calendar events otomatis
- Send reminders

4. WhatsApp Bot

- Bot ambil event by date
- Send event info ke user
- Reminder otomatis

🐛 Troubleshooting

CORS Error

Jika mengalami CORS error saat request dari browser:

```
Access to fetch at '...' from origin '...' has been blocked by CORS policy
```

Solusi: Server sudah set `Access-Control-Allow-Origin: *` di header

Connection Timeout

```
Error: timeout of 10000ms exceeded
```

Solusi:

- Cek koneksi internet
- Pastikan server sedang online
- Increase timeout setting

404 Not Found

```
{
  "status": 404,
  "message": "Event not found"
}
```

Solusi:

- Pastikan ID event benar
- Cek dengan GET all events dulu

📝 Changelog

v1.0.0 (2025-10-29)

- Initial release
- CRUD operations
- Filter by date, date range, dan status
- Statistics endpoint
- Full documentation

Last Updated: 2025-10-29
